Languages: Arabic (Native), English (Professional Working Proficiency)

PROFESSIONAL SUMMARY

AI Platform Engineer with 5+ years of experience designing and operating LLM-powered platforms, agentic AI systems, and enterprise-scale automation infrastructure for a Tier-1 telecom. Proven track record of architecting Python-based platform components, agent orchestration frameworks, and SDK-style integrations using LangChain and OpenAI to enable Applied AI teams to ship reliable, secure AI-powered applications. Delivered approximately 4M JOD in cost savings at Zain Jordan through scalable AI and automation platforms, including a production agentic AI system with autonomous tool calling and a RAG-based document analysis chatbot. Skilled in agent orchestration, prompt management, tool calling, RAG architectures, distributed data processing (PySpark), and cloud-native AI (Azure, Google Cloud, Vertex AI). Awarded Best Digital Transformation Initiative in Telecom (Global Economics 2025) and featured by TM Forum for AI chatbot innovation.

CORE SKILLS

Programming Languages: Python, SQL, PL/SQL, Java, C#, JavaScript, React

AI / LLM Engineering: LangChain, OpenAI, LLaMA, Retrieval-Augmented Generation (RAG), agent orchestration, multi-step AI workflows, prompt engineering, prompt management, tool calling, function calling, memory handling, agentic AI, LLMOps

AI Platform & SDKs: Python libraries and SDK design, configuration-driven platform components, model and tool integrations, internal developer platforms, AI observability and evaluation tooling, model performance monitoring

Distributed Systems & Data: PySpark, Elasticsearch, distributed data processing, large-scale reconciliation pipelines, platform reliability, scalable architectures

Cloud & MLOps: Microsoft Azure (LLMOps), Google Cloud Platform, Vertex AI

Automation & Tooling: UiPath, Selenium, enterprise RPA, developer experience and operational tooling

Other: Computer Vision, Deep Learning, Neural Networks, Blockchain

Leadership: Platform architecture and system design, technical leadership and mentoring, cross-team collaboration, ownership and accountability

PROFESSIONAL EXPERIENCE

AI Platform & RPA Lead (RPA & AI Division Leader) — Zain Jordan

Apr 2022 – Present | Amman, Jordan

- Architected and operated the organization's core AI and automation platform, supporting multiple AI agents, LLM-powered services, and enterprise applications used across business, finance, and operations teams.
- Led the design of an agent orchestration framework on top of LangChain to support complex multi-step AI workflows, including autonomous user-intent analysis, query generation, tool execution, and visual data response.

- Designed reusable Python libraries and configuration-driven platform components (Excel-based runtime configuration) that standardized model integration, prompt management, tool calling, and enterprise data access for non-developer teams.
- Built and shipped Agentic AI, a production LLM-powered agent that converts natural-language requests into executed PL/SQL queries and visualizations with zero database access required by end users; eliminated manual reporting cycles for business stakeholders while enforcing strict no-data-exposure controls.
- Engineered Botzilla, a Retrieval-Augmented Generation (RAG) document analysis chatbot built with Python, LangChain, and OpenAI; delivered secure 5–15 second response times over private document corpora within an enterprise-controlled environment.
- Drove platform architecture decisions, design standards, and best practices covering scalability, reliability, security, and operational performance for all AI services.
- Built scalable integration layers connecting internal services and external LLM providers; standardized prompt, tool, and memory components across agents.
- Optimized enterprise reconciliation pipelines using PySpark, reducing batch runtime from 8 hours to minutes and improving downstream data reliability for AI and reporting workloads.
- Established platform observability practices for prompts, traces, and model performance to support evaluation, debugging, and continuous improvement of AI agents.
- Delivered approximately 4M JOD (~5.6M USD) in cumulative cost savings over three years through enterprise AI and automation initiatives.
- Mentored engineers and partnered with Applied AI and business teams to adopt platform components, prompt frameworks, and agent patterns; led cross-team enablement sessions.

Leaders Program Trainee — Tammei (Multi-National Non-Profit)

Sep 2021 – Jun 2022 | Amman, Jordan

- Built interactive analytics dashboards using Power BI and Excel Power Query to support internal data-driven decision making.
- Managed and transformed multi-source data pipelines for internal reporting and program evaluation.
- Developed an end-to-end e-learning and community platform using WordPress, LearnDash, and BuddyPress.

Full-Stack Developer — Tammei (Multi-National Non-Profit)

Nov 2020 – May 2021 | Amman, Jordan

- Designed and shipped a custom web-based project management system using JavaScript, PHP, and SQL, replacing manual workflows for the program operations team.
- Maintained and supported the full-stack infrastructure, including release management and incident response.

SELECTED PROJECTS

Agentic AI — LLM-Powered Autonomous Agent (Python, LangChain, PL/SQL, OpenAI)

Production agent at Zain that autonomously analyzes user intent, generates and executes parameterized SQL queries, and produces visual data responses. Demonstrates agent orchestration, tool calling, and memory handling on a configuration-driven platform. Adopted across multiple departments with strict data-protection guarantees and no end-user database access.

Botzilla — RAG Document Analysis Chatbot (Python, LangChain, OpenAI)

Enterprise Retrieval-Augmented Generation chatbot for secure document search and Q&A over private document corpora. Returns answers in 5–15 seconds, runs entirely within a controlled environment, and is fully customizable to evolving business needs.

Computer Vision Mask Detector — Graduation Project (Python, Deep Learning)

Trained and tuned a 5-hidden-layer convolutional neural network on 20,000 labeled images (binary classification) for real-time mask-usage detection at campus entrances during COVID-19.

EDUCATION

BSc, Artificial Intelligence — Al-Zaytoonah University of Jordan

Graduated February 2022 | GPA: 93.6 / 100

CERTIFICATIONS & CONTINUOUS LEARNING

- LLMOps with Azure
- IBM Machine Learning Professional Certificate (6-course series)
- IBM Data Engineering and Machine Learning with Spark
- IBM Data Science Orientation
- Certified Professional Trainer (CPT) — IAPPD, United Kingdom
- Foundations of Data Science and Exponential Tech — IE Business School, Spain
- Transformation and Implementation — IE Business School, Spain
- Analysis of Competitive Context — IE Business School, Spain
- Business Foundations Module — IE Business School, Spain

AWARDS & HONORS

- Best Digital Transformation Initiative in Telecom — Global Economics, 2025
- AI Chatbot work featured by TM Forum
- Winner — Zain Creativity and Innovation Competition for Employees
- Keynote Speaker — IEEE Robotics Week Jordan, 2025
- 2nd Place — National Robotics Olympiad, MENA, 2018
- 1st Place — National Robotics Olympiad, Qatar, 2015
- 3rd Place — Scientific Research Competition, Qatar, 2015–2016
